Visualizing earthquake scenarios in urban areas

Interactive simulation framework to investigate seismic performance for urban regions

Integration of ground motion and structural response

Realistic simulation using advanced computational and visualization methods

The SPUR (Seismic Performance for Urban Regions) project is sponsored by NSF under award number 6066047-0121989. The ground motion simulation was provided by Jacobo Bielak, Dept. of Civil and Environmental Engineering, Carnegie Mellon University. The structural response simulation was provided by Gregory L. Fennes, Dept. of Civil and Environmental Engineering, University of California, Berkeley.
